

Problem:

[Grab your reader's attention with a great quote from the document or use this space to emphasize a key point. To place this text box anywhere on the page, just drag it.]

Example 1:

Example 2:

Program:

```
//Libraries

#include <stdio.h> //standard input-output library
#include <stdlib.h> //standard library

int findsum(int *arr,int n){ //function for processing the current array with size n

    if(n==1) //checks if the array have have only one element, which is the result
        return arr[0];

    int i,j,ind=0;

    //dynamically allocate an array of size n-1 , to store the results of current processing
    int *new_arr=(int *)malloc((n-1)*sizeof(int));

    for(i=0;i<n-1;i++){
        j=i+1;
        //find sum of array values at i and j indices in each looping and assigns to the new_array
        new_arr[ind++]=(arr[i]+arr[j]);
    }

    return findsum(new_arr,n-1); //return the result in each function call

}

//main function
void main(){

    int n;

    printf("\nEnter the no of elements:");

    scanf("%d",&n);

    int *arr=(int *)malloc(n*sizeof(int)); //allocate an array of size n dynamically
```

```
printf("Enter elements:");  
for(int i=0;i<n;i++)  
    scanf("%d",&arr[i]); //read n elements from user  
int res=findsum(arr,n); //function call for initialising the calculation process  
printf("%d",res); //print final result  
}
```

Result:

Example 1:

Enter the no of elements:5

Enter elements:5 5 5 5 5

80

Example 2:

Enter the no of elements:6

Enter elements:2 4 7 5 3 1

158
